

MarketLink

ReadMe: submission, how to run and assumptions

TechWiz 2026 · End-to-End Web Solutions

Team Omniverse · Aptech Learning Centre, F.B. Area, Karachi

The SRS asks for a ReadMe.doc with the assumptions made by the team. This file (and `ReadMe.docx`) is that document. It was drafted with Claude Code from the project itself; please check it and add your team's own notes before submitting.

1. What is in the submission

Item	Where
The web application (React client, Node.js / Express server)	<code>MarketLink/client</code> , <code>MarketLink/server</code>
Database scripts (MongoDB, instead of .sql)	<code>MarketLink/database/marketlink-schema.mongoose.js</code> and <code>MarketLink/database/sample-data/*.json</code>
Project report	<code>MarketLink/docs/MarketLink-Project-Report.docx</code> (and <code>.pdf</code>)
Test plan and test report	<code>MarketLink/docs/MarketLink-Test-Report.docx</code> (and <code>.pdf</code>)
Technical notes	<code>MarketLink/docs/architecture.md</code> , <code>design.md</code> , <code>view.md</code> , <code>task.md</code>
Screenshots of every page	<code>screenshots/</code> (in the Complete zip)
Installation and credentials in short	<code>MarketLink/README.md</code> , <code>HOW-TO-RUN.txt</code>
Demo video (.mp4)	to be recorded by the team (SRS 1.9)

2. How to run

1. Install Node.js 20 or newer and MongoDB (or use a free MongoDB Atlas database).
2. In the `MarketLink` folder run `npm run install:all`.
3. Copy `server/.env.example` to `server/.env`; set `MONGO_URI` and `JWT_SECRET`.
4. Run `npm run seed` to load the demo data.
5. Run `npm run dev` and open `http://localhost:5173` (or `npm run build` and `npm start`, then `http://localhost:5000`).

3. User credentials

Role	E-mail	Password
Administrator	<code>admin@marketlink.com</code>	<code>Admin@123</code>
Farmer	<code>farmer@marketlink.com</code>	<code>Farmer@123</code>
Farmer waiting for approval	<code>pending.farmer@marketlink.com</code>	<code>Farmer@123</code>
Customer	<code>customer@marketlink.com</code>	<code>Customer@123</code>
Customer (family member)	<code>omar@marketlink.com</code>	<code>Customer@123</code>

More accounts are listed in the project report, section 7.

4. Assumptions

1. **Payment** is made in person to the farmer at pickup; there is no online payment (SRS 1.5).
2. **Pickup only**; there is no delivery or courier service (SRS 1.5).
3. **Farmer identity** and claims such as "organic" or "pesticide-free" are not verified by the platform (SRS 1.5); the admin only approves or suspends stalls.
4. **One time zone** (Asia/Karachi) is used for market days, pickup slots, cut-off times and "today".
5. **The e-mail address is the login name**; one login page serves customers, farmers and administrators.
6. **MongoDB** is used (MERN stack), so the database is described by a `mongosh` script and JSON sample data instead of `.sql` files.
7. **OpenStreetMap** with Leaflet is used for maps (the SRS allows Google Maps API or OpenStreetMap); directions use the free OSRM service and a Google Maps link.
8. **An order belongs to one farmer and one pickup slot**. A basket with products from two farmers becomes two pre-orders, each with its own slot.
9. **Stock is reserved when a pre-order is placed** and returned when it is declined or cancelled.
10. **Customers can change or cancel** an order only before the farmer's cut-off time (set by each farmer, in hours before the pickup slot).
11. **Reviews are verified** when they come from a customer who collected the order; the customer first confirms "Did you receive your order?".
12. **Guests can check out**; an account is created for them and the password is e-mailed.
13. **E-mail** is sent through the SMTP server in `server/.env`; without one, e-mails are printed in the server window so the app still works during a demo.
14. **Stock photos** are from the Open Images Dataset (CC BY 2.0). Their photographers are listed on the website's Photo credits page instead of on the photos.
15. **Languages**: English and Urdu for public, customer and farmer pages; the admin area is in English.

5. AI tools used

Tool	Used for
Claude Code (Anthropic)	Coding assistant during development and tests; first drafts of the documents
Canva	Logo
EDSR super-resolution (OpenCV)	Larger copies of the banner photos
<i>(add any other tools your team used)</i>
